

Analisis Performa Saham Perbankan

1. Total Volume Perdagangan (Total Trading Volume)

- **Deskripsi:** Menunjukkan jumlah total saham yang diperjualbelikan selama seluruh periode analisis untuk melihat skala likuiditas pasar.
- **Formula SQL:**

```
SELECT SUM(CAST(volume AS BIGINT)) as total_volume FROM fact_trading;
```

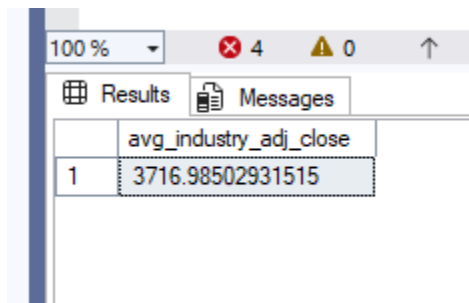

A screenshot of a SQL query results window. It has two tabs: 'Results' and 'Message'. The 'Results' tab is active, showing a table with one column 'total_volume' and one row with the value '955085929388'.

	total_volume
1	955085929388

2. Rata-Rata Harga Penutupan Disesuaikan (Average Adjusted Close Price)

- **Deskripsi:** Nilai rata-rata harga saham industri perbankan (4 bank) setelah disesuaikan dengan aksi korporasi seperti *stock split* atau dividen.
- **Formula SQL:**

```
SELECT AVG(adj_close) as avg_industry_adj_close FROM fact_trading;
```

A screenshot of a SQL query results window. It has two tabs: 'Results' and 'Messages'. The 'Results' tab is active, showing a table with one column 'avg_industry_adj_close' and one row with the value '3716.98502931515'.

	avg_industry_adj_close
1	3716.98502931515

3. Rata-Rata Pertumbuhan Tahunan (Average YoY Growth)

- **Deskripsi:** Satu angka yang menunjukkan rata-rata persentase pertumbuhan harga saham perbankan per tahunnya.
- **Formula SQL:**

```
SELECT AVG(yoy_growth) as avg_industry_growth
FROM (
    SELECT ((AVG(f.adj_close) - LAG(AVG(f.adj_close)) OVER (PARTITION BY f.kode_saham
ORDER BY w.tahun)) / LAG(AVG(f.adj_close)) OVER (PARTITION BY f.kode_saham ORDER
BY w.tahun)) * 100 as yoy_growth
```

```
FROM fact_trading f JOIN dim_waktu w ON f.date = w.date GROUP BY f.kode_saham,  
w.tahun  
) as sub;
```

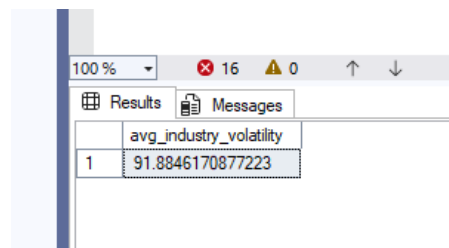

A screenshot of a SQL Server query results window. The window has a toolbar at the top with a zoom dropdown set to 100%, a status bar showing 13 errors and 0 warnings, and tabs for 'Results' and 'Messages'. The 'Results' tab is active, displaying a table with two columns: 'avg_industry_growth' and a single row with the value '14.2476358743294'.

	avg_industry_growth
1	14.2476358743294

4. Rata-Rata Volatilitas Harian (Average Daily Volatility)

- **Deskripsi:** Mengukur rata-rata fluktuasi harga harian (selisih *high* & *low*) di seluruh industri perbankan untuk menilai risiko pasar secara makro.
- **Formula SQL:**

```
SELECT AVG(CAST(high AS FLOAT) - CAST(low AS FLOAT)) as avg_industry_volatility FROM  
fact_trading;
```

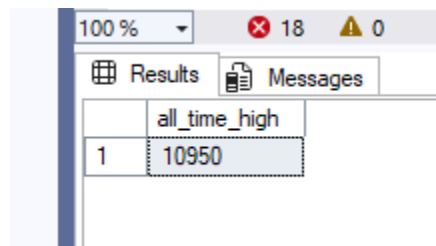

A screenshot of a SQL Server query results window. The window has a toolbar at the top with a zoom dropdown set to 100%, a status bar showing 16 errors and 0 warnings, and tabs for 'Results' and 'Messages'. The 'Results' tab is active, displaying a table with two columns: 'avg_industry_volatility' and a single row with the value '91.8846170877223'.

	avg_industry_volatility
1	91.8846170877223

5. Harga Saham Tertinggi (All-Time High Industry)

- **Deskripsi:** Angka tunggal yang mencatat rekor harga tertinggi yang pernah dicapai dalam industri perbankan (di antara ke-4 bank tersebut) selama periode pengamatan.
- **Formula SQL:**

```
SELECT MAX(high) as all_time_high FROM fact_trading;
```

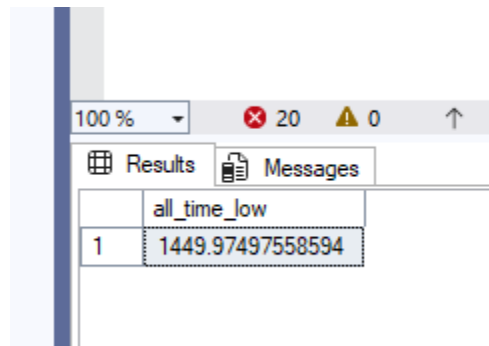

A screenshot of a SQL Server query results window. The window has a toolbar at the top with a zoom dropdown set to 100%, a status bar showing 18 errors and 0 warnings, and tabs for 'Results' and 'Messages'. The 'Results' tab is active, displaying a table with two columns: 'all_time_high' and a single row with the value '10950'.

	all_time_high
1	10950

6. Harga Saham Terendah (All-Time Low Industry)

- **Deskripsi:** Angka tunggal yang mencatat harga terendah sebagai batas bawah pergerakan harga saham perbankan sepanjang periode.
- **Formula SQL:**

```
SELECT MIN(low) as all_time_low FROM fact_trading;
```

	all_time_low
1	1449.97497558594
